ABSTRACT

The European Service Network of Mathematics for Industry and Innovation (EU-MATHS-IN) links 17 national networks across Europe (<https://eu-maths-in.eu/>). It fosters high-impact collaborations by facilitating communication and information exchange between researchers and industrial partners.

This minisymposium showcases successful technology transfer projects achieved through EU-MATHS-IN. Researchers and industry representatives present real-life examples that demonstrate the power of mathematics to drive innovation.

In addition, we present the EU-MATHS-IN OpenDesk (<https://opendesk.eu-maths-in.eu/>), an innovative support platform for European companies, start-ups and public administrations. This service provides valuable resources and guidance on how to use mathematics for problem solving and technological progress.
